#### Description

We have figured out how to make all of the prices show there correct decimal places, but products now show trailing zeros on the prices.

Example: \$0.015 is a perfect price, but if a product costs \$1.15 it is showing as \$1.150

There must be a way to get rid of trailing zeros on prices that have them.

#### History

- Assignee set to Jurij Nikolajev
- Target version set to ver. unsorted tasks

This is not a bug.

There is no function to remove trailing zeros.  
It can be done with a bit of custom work.

We are thinking about adding this function to extension, but there are some technical issues with it (some other functions do not work in this case).  
When our team has some free time we will try to implement this (maybe in summer).
